

POLICE NOTICE

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the preferences and behaviors of potential customers.

2. Once a market need is identified, the next step is to develop a concept for the product. This involves brainstorming ideas and creating a prototype to visualize the product.

3. The third step is to conduct a feasibility study. This involves evaluating the technical, financial, and operational aspects of the product to determine if it is viable.

4. If the feasibility study is successful, the next step is to develop a business plan. This involves outlining the marketing, sales, and distribution strategies for the product.

5. The final step is to launch the product. This involves manufacturing the product, distributing it to retailers, and promoting it to the target market.
